#### **DETAILED ACTION**

## Specification

1. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

### Arrangement of the Specification

- 2. As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:
  - (a) TITLE OF THE INVENTION.
  - (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
  - (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
  - (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT
  - (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or

REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)

- (f) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.
  - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (1) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Urs et al (US Patent No. 6,292,781).
- 4. Regarding claim 1, Urs discloses method and apparatus for facilitating distributed speech processing in a communication system, and provides support for a telecommunication system (Figure 3; col. 7, line 3 to col. 9, line 52) comprising a terminal, a switch and at least a part of an I-net comprising a memory for storing I-net information blocks at locations defined by I-net addresses, with at least parts of said I-net addresses being generated in response to control signals originating from said terminal (col. 7, lines 54-65), and with at least parts of said I-net information blocks being sent from said memory to said terminal in the form of response signals, characterized in that said switch comprises a detector for detecting speech-recognition/non-speech-recognition related parts in said signals, and comprises a processor for, in response to a detection, processing said signals (col. 7, line 3 to col. 9, line 52).

Regarding claim 2, Urs discloses the control signals comprise speech-recognition related parts and/or non-speech-recognition related parts, with said processing comprising, in response to a detection of a speech-recognition related part, routing said speech-recognition related part to a server for converting said speech-recognition related part into an address signal destined for

said memory (col. 7, line 54 to col. 8, line 11), and with said processing comprising, in response to a detection of a non-speech-recognition related part, converting said non-speech-recognition related part into an address signal destined for said memory (col. 8, lines 12-41).

Regarding claim 3, Urs disclose the terminal comprises a preprocessing unit (316) for preprocessing speech-recognition related parts of said control signals, with said server comprising a final processing unit for final processing said preprocessed speech-recognition related parts (col. 8, line 42 to col. 9, line 7).

Regarding claim 4, Urs discloses the response signals comprise speech-recognition related parts and/or non-speech-recognition related parts, with said processing comprising, in response to a detection of a speech-recognition related part, routing said speech-recognition related part to said server, and with said processing comprising, in response to a detection of a non-speech-recognition related part, letting said non-speech-recognition related part pass to allow said non-speech-recognition related part being sent to said terminal (col. 7, line 3 to col. 9, line 52).

5. Regarding claims 5-10, claims 5-10 are similar in scope and content to claims 1-4 and are therefore rejected under similar rationale.

#### Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gerson (US Patent No. 6,868,385)
